EDUCATION

Lehigh University

Bethlehem, Pennsylvania

Bachelor of Science in Integrated Business and Engineering: Finance

May 2026

Bachelor of Science in Electrical Engineering

GPA: 3.8 / 4.0

- **Relevant Coursework:** Electronic Circuits Design & Lab, Microcontrollers Lab, Digital Signal Processing, VLSI Design, Electromagnetics, Power Electronics, Semiconductor Devices.
- **Honors:** Tau Beta Pi Engineering Honor Society Member, Dean's List all semesters.
- **Skills:** LTSpice, MATLAB, Debugging, Oscilloscope, System Verilog, C/C++, KiCad, Cadence, LabVIEW, Python

WORK EXPERIENCE

Schott Advanced Optics

Duryea, Pennsylvania

Consultant

June 2025, August 2025

- Improved efficiency and productivity of maintenance repair process by 7% by providing more accurate and readily available information.
- Developed system in SAP for automatically generating purchase requisitions based on quantity levels.
- Created clickable, interactive document of machine drawings for mechanics that automatically opens the desired item to its material record in SAP.

Batteryeze

San Francisco, California

Business Development Intern

May 2024 – August 2024

- Collaborated directly with the startup founder in a hybrid setting; independently defined my work with minimal supervision and held regular feedback meetings to validate my work amidst ambiguous, shifting priorities.
- Worked with investors and a research lab, using independent research and customer reports, to support switch from providing EV battery analytics for auto insurers, to supporting first responders with battery testing kit.

Safran Optics 1

Bedford, New Hampshire

Quality Engineering Intern

June 2023 – August 2023

- Mentorship with Quality Engineer, learning about manufacturing process, failure analysis, and process improvement when producing thermal imagers.
- Audited technicians and the manufacturing process to detect failure points, updating Work Instructions to improve final yield rate to 96% on the production line.

PROJECT EXPERIENCE

Analog Circuit Design, Testing, & Simulation – LTSpice, Oscilloscope, Troubleshooting

- Designing a 3-stage general-purpose discrete opamp; simulated 45dB open-loop gain, 2MHz GBP.
- Troubleshoot and redesigning Class D Amp and LNA board from previous group with minimal documentation.

Microcontroller – TM4C123G Launchpad Evaluation Board

- Designed a C-based finite-state machine on a TM4C123 MCU to control a mock garage-safety system.
- Integrated IR distance sensing with 12-bit ADC to trigger FSM logic and display to UART console.
- Drove a servo with a PWM signal, implemented watchdog supervision, and activated LEDs based on FSM logic.

Digital Circuit Design — Cadence Virtuoso, System Verilog, Synopsys Design Compiler/VCS

- Designed and simulated 6-bit dividend and 4-bit divisor binary divider by creating dynamic shift registers, latches, flip flops, pass gates, muxes, and adders to implement a modified division algorithm.
- Created and tested using System Verilog, and synthesized and took to layout in Synopsys, a RISC-V instruction processing unit to generate control signals for a single-cycle processor supporting RV32A/RV32I instructions.

Digital Signal Processing — MATLAB

- Designed and wrote MATLAB scripts for FIR and compensation filters, calculated SNR of a quantizer, as well as found the Power Spectral Density of a uniform random process using the Fast Fourier Transform.

ACTIVITIES & INTERESTS

Interests: Entrepreneurship, Drawing, Weightlifting.
